

---

### BOOK STORE PART 3

---

- Add Using System.IO
- Create Text File called book.txt to hold book objects
- Write a loop to process all books into an ArrayList that comes from the IO.
- Write statements to load the Combo box with book items.
- Use a try/catch to handle IO Errors.
- Write the order to a file called orders.txt when the complete order button is click add proper IO error handling to ensure that no errors will be displayed when writing the information to the file.

	<b>MEASUREMENT OF PERFORMANCE OF ASPECT</b>			
<b>ASPECT</b>	<b>OBJECTIVES SUBSTANTIALLY MET</b>	<b>MEETS MINIMAL REQUIREMENTS</b>	<b>NEEDS IMPROVEMENT</b>	<b>FAILURE TO MEET REQUIREMENTS</b>
	50	40 - 30	20- 10	0

<b>CORRECTNESS</b>  Max Points : 50	1. Program follows the required specification. 2. Program runs and completes all required tasks. 3. Program handles special cases. 4. Executes without errors	1. Program follows the required specification. 2. Program works and completes most tasks appropriately. 3. Program fails to work for special cases 4. Executes without errors.	1. Program follows the required specification. 2. Program does not execute due to errors. 3. Incorrect results for most or all input	1. Program does not follow the required specification. OR 2. Program not attempted or work product does not meet activity requirements minimally.
<b>USER INTERFACE</b>  Max Points : 100	1. Includes all appropriate, descriptive and user friendly input prompts 2. Output is user-friendly, and clearly describes what is expected from the user.	Input or output are mostly user friendly and some prompts/descriptions are inappropriate or missing	Lacks most or all input and output descriptions	Program not attempted or fails to accept input and/or output
<b>DOCUMENTATION</b>  Max Points : 50	1. Program contains required project commenting header with correct format and clearly describes the purpose of the project. 2. Program contains function commenting headers clearly describing the purpose of the function. 3. Program contains comments for the statements where ever necessary 4. Self-commenting variable, method and class names are used. (Camel –casing notation is mandatory)	1. Any one piece of commenting information is missing 2. Self-commenting variable, method and class names are used. (Camel – casing notation is mandatory)	Comments are included but poorly described. OR If two or more pieces of information is missing.	Comments are missing. Comments are too general.

<b>CONSTRUCTION</b>  Max Points : 50	1. Tasks are modularized and well defined. Source code is logically laid out, using current best practices. 2. Code uses proper control structures and data types efficiently	Some tasks are modularized. Most user interface source code is isolated from implementation . OR Most of code uses proper control structures and data types.	Tasks are not modularized, interface and implementation features are intermixed. OR Improper control structures and data types utilized. Inefficient code.	Source code does not demonstrate planning or order at a minimal level. AND/OR No attempt to use proper control structures or data types.
